- Research Intern** | Taiwan AI Labs 07.2020 ~ 07.2021
- AI Music Team, Human-Computer Interaction Group**
- Designed mechanisms to exert time-varying control on Transformers for sequence generation (see publication [5])
 - Bridged Transformers, the mechanism above, and Variational Autoencoders for fine-grained style transfer of long musical pieces, allowing users to harness harmonic & rhythmic intensities down to the bar level (publ. [5])
 - Proposed a 3-stage pipeline to generate well-structured pieces with recurring themes and proper development
